

MONTANA AIR NATIONAL GUARD

Maintain Base Pavements

MAINTAIN BASE PAVEMENTS (DESIGN SERVICES)

General upgrade and maintenance of MTANG Asphaltic Surfaces. Work included 8,500 square yards of new parking surfaces and repairs, 44,000 square yards of asphaltic concrete overlaying of different thicknesses, intensive milling of existing surfaces to provide proper drainage at overlay areas, 53,000 square yards of seal coat, and crack preparation and sealant. Project was complicated by erratic positioning of buildings, streets, driveways, some surfaces had both aircraft and vehicle usage and required a design to reflect accordingly. Note: Neil Consultants, Inc. provided the construction services for this design under a different contract.

MAINTAIN BASE PAVEMENTS (CONSTRUCTION SERVICES)

NCI was responsible for type 'C' service for construction administration and field inspection for this project. NCI had previously designed this project under the NCI Open End Contract with MTANG. Type 'C' services also included shop drawing review, plan interpretation, change order-field modifications, quantities verifications, field review of contractors performance per the contract document requirements, close supervision for proper drainage at all areas, field testing of Contractor's work, coordination of Contractor's work and military operation continuance, and final closeout of project.
